

## Release and Development Planning

### R. Dalnekoff

19 January 1995

# CSMS Release and Development Plan

- Defines our implementation approach for development of CSMS components, and our migration approach for incorporating prototypes into formal development plans
- Breaks down CSMS subsystems into components
- Characterizes component development by resource requirements
  - developers, tools, prototype and deployed build reuse
- Establishes the sequencing of software development efforts, COTS procurement and integration activities, and incrementally developed components into the formal track through segment I&T
- Provides release-specific development plans and schedules
  - Key drivers include; project-level schedules, release plan, and development standards; and segment-level schedules, design, and I&T planning
- Presents a software "Bill of Materials" list by release
  - CSMS builds in the release
  - Threads by build

# CSMS Release and Development Plan (cont.)

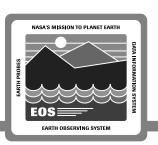

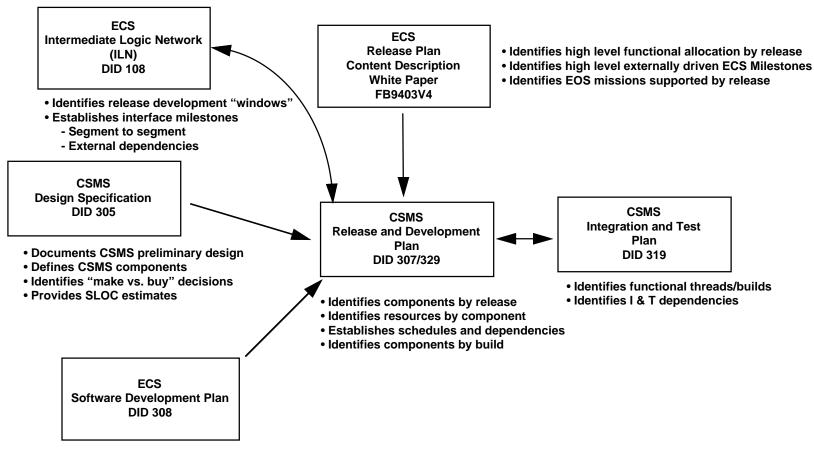

#### **Plan Organization:**

- Presents a consolidated list of CSMS components
  - Separate lists by hardware and software components per release
  - Organized by the build/thread perspective
  - Estimated SLOC/COTS effort by component
- Dependency plan describes development process for integration of COTS, custom code, prototypes, components from previous releases and other segments for handoff to I&T
- Release-specific schedules which identify resource requirements and dependencies for each component and support the development of detailed schedules which trace to the project ILN
- Release-specific product descriptions traceability from the builds to components

705-CD-003-001

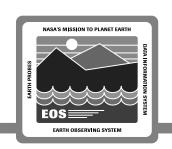

# CSMS Release and Development Plan Document Relationships

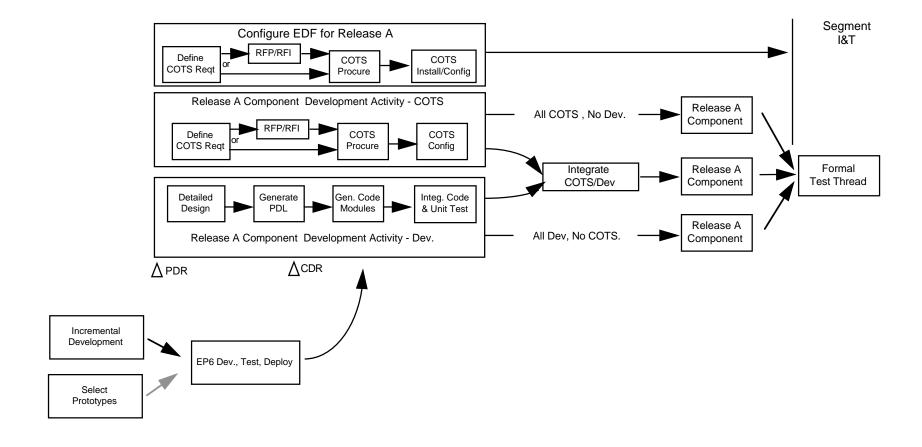

- Establishes ECS software design/development approach and methodologies
- Establishes program software development standards
- · Assigns organizational responsibilities

# Sample Development Concept - Release A

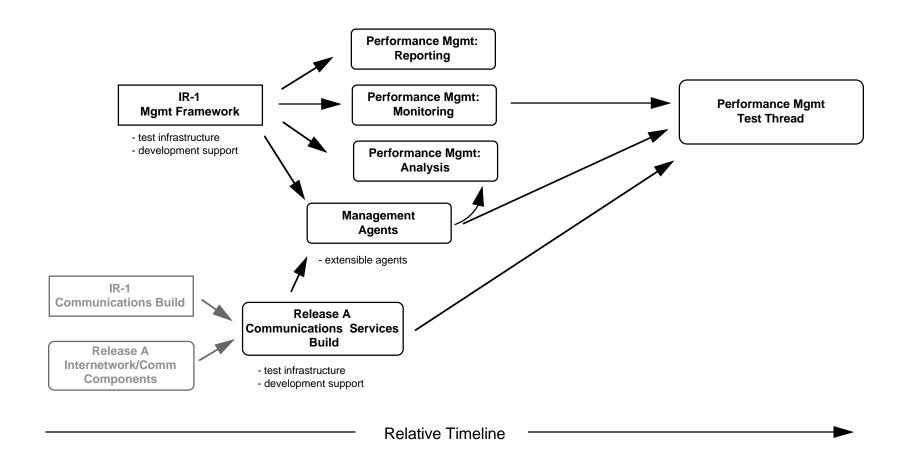

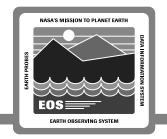

705-CD-003-001 RD1-5

## Sample Release-Specific Development Plan-Performance Management, Release A

705-CD-003-001

### Release-Specific Product Lists

#### Release-specific software "Bill of Materials"

- Identifies the CSMS builds per release
- Identifies components per build
  - tracks component and build reuse from CSMS and other segments
